nel	Network Error Logging is a new header that instructs the browser to send reports during various application errors. You can sign up for a free account on Report URI to collect these reports.
server	Server value has been changed. Typically you will see values like "Microsoft-IIS/8.0" or "nginx 1

Implementation Guide

This report highlights security issues detected through client-side analysis. For a comprehensive security assessment, engaging a professional penetration tester.

To implement the fixes above:

1. Work with your development team to address each issue in order of criticality
2. Retest after implementing each fix
3. Consider implementing a web application firewall for additional protection

This report was automatically generated and represents an automated assessment of publicly accessible aspects of your web application. For a more comprehensive security assessment, consider engaging with a professional security consultant.
